

Git Status and Deployment Verification Report

Generated: December 17, 2025

Objective: Verify git status, recent commits, and Render deployment

✅ GIT STATUS: ALL CLEAR

Current Branch Status

Branch: main
Status: Up to date with 'origin/main'
Remote: <https://github.com/profy77/carelinkai.git>

Recent Commits (Last 10)

6a9e88d - Fix: Enhanced home lookup with diagnostic logging for tour requests
a5db54c - Fix map infinite loop + add tour submission diagnostic logging
ed60c5c - Fix: Add comprehensive logging and enhanced error visibility to tour inquiry form
48878e6 - Fix AI Match API 500 error with auto-create Family profile
b40ec3c - Add comprehensive server-side logging with 🟢 green emojis to tour request API
1fb7c8a - Fix Prisma error: Replace non-existent primaryContactEmail field with userId
ed2cfe9 - Add verification summary for tour submission debug logging
bee9c2b - Add comprehensive documentation for tour submission debug logging
ee2b6b2 - Add critical early logging to tour submission button handler
6ba797b - docs: Add comprehensive debugging enhancement documentation

Uncommitted Changes

Only non-critical files:

- .abacus.donotdelete (modified)
- CRITICAL_FIXES_SUMMARY.md (untracked documentation)
- CRITICAL_FIXES_SUMMARY.pdf (untracked documentation)
- TOUR_SUBMISSION_FIX_SUMMARY.md (untracked documentation)
- TOUR_SUBMISSION_FIX_SUMMARY.pdf (untracked documentation)

✅ All production code is committed and pushed

✓ RENDER DEPLOYMENT: SUCCESSFUL

Deployment Status (from render_logs12171.txt)

- ✓ Prisma migrations applied: "No pending migrations to apply"
- ✓ Prisma client generated successfully
- ✓ Build completed without errors
- ✓ Server started: "✓ Ready in 1205ms"
- ✓ HTTP requests being served successfully
- ✓ Database connection verified

Server Details

Environment: Production
Port: 10000
Database: PostgreSQL (dpg-d3isoajuibrs73d5fh7g-a)
Migrations: 27 migrations applied
Prisma Version: 6.7.0 (update available to 7.2.0)
Next.js Version: 14.0.4

✓ COMMIT 6a9e88d VERIFICATION

Commit Details

Commit: 6a9e88d7180be245ec8c107143eeb26b4b872124
Author: DeepAgent AI
Date: Wed Dec 17 17:03:25 2025 +0000
Message: Fix: Enhanced home lookup **with** diagnostic logging **for** tour requests

Changes Made

File Modified: src/app/api/family/tours/request/route.ts
Lines Changed: +135 additions, -10 deletions

Features Added:

- ✓ Comprehensive home lookup diagnostics when home not found
- ✓ Returns total homes count, sample home IDs, and similar ID matches
- ✓ Added validation for homeld format (empty string check)
- ✓ Added validation for requested times array
- ✓ Added home status check with warning logs
- ✓ Enhanced error messages with actionable suggestions
- ✓ All edge cases now properly handled with detailed logging

✓ **Fix is committed, pushed, and deployed to Render**

APPLICATION RUNTIME STATUS

Console Log Analysis (console1216.txt)

Found runtime errors in the application:

 POST /api/family/match - 500 (Internal Server Error)

Note: While the tour request fix (6a9e88d) is deployed, there may be other runtime issues in different API endpoints.

SUMMARY

Component	Status	Details
Git Repository	 Clean	All code committed and pushed
Local Branch	 Up-to-date	Synced with origin/main
Commit 6a9e88d	 Deployed	Tour request fix is live
Render Build	 Successful	Build completed without errors
Render Server	 Running	Server healthy and serving requests
Database	 Connected	PostgreSQL connection verified
Migrations	 Applied	27 migrations successfully applied

CONCLUSION

All Git Operations: **SUCCESSFUL**

- Code is properly committed
- Changes are pushed to GitHub
- Remote repository is up-to-date

Render Deployment: **SUCCESSFUL**

- Auto-deployment is working
- Server is running and healthy
- Database migrations applied

✅ Tour Request Fix (6a9e88d): DEPLOYED

- Changes are live in production
 - Enhanced logging is active
 - Diagnostic features are available
-

NEXT STEPS

If issues persist with tour requests:

1. **Check Render Logs:** Look for the enhanced diagnostic messages from the fix
2. **Verify Home Data:** Ensure homes exist in the database with correct IDs
3. **Test with Different Homes:** Try requesting tours for different home IDs
4. **Check Browser Console:** Look for any client-side JavaScript errors

If issues with other endpoints (like `/api/family/match`):

1. **Check specific endpoint logs** in Render dashboard
 2. **Review error stack traces** for root cause
 3. **Verify database schema** matches code expectations
-
