

# Syntax Error Fix - extraction.ts

---

## Issue

---

Build failing with syntax error:

```
./src/lib/documents/extraction.ts
Error: Expected ',', got ':'
Line 23: where: { id: documentId },
```

## Root Cause

---

Missing opening brace in `prisma.document.findUnique` call.

### Incorrect Syntax:

```
const document = await prisma.document.findUnique(
  where: { id: documentId }, // ❌ Missing opening brace
);
```

### Correct Syntax:

```
const document = await prisma.document.findUnique({ // ✅ Opening brace added
  where: { id: documentId },
});
```

## Solution

---

Added the missing opening brace `{` before the `where` clause.

## Files Changed

---

1. `src/lib/documents/extraction.ts` - Fixed syntax error

## Why This Happened

---

When creating the `extraction.ts` file with dynamic imports, the opening brace was accidentally omitted in the Prisma query.

## Testing

---

- ✅ Syntax error fixed
- ✅ Opening brace added
- ✅ Prisma query correct
- ✅ Build compiled successfully

## Build Output

---

Creating an optimized production build ...

- ☒ Compiled successfully
- ☒ Linting **and** checking validity of types
- ☒ Collecting page data
- ☒ Build completed successfully

## Expected Result

---

Render deployment should now succeed with clean build.

---

**Status:** ☒ Fixed
