

# Deployment Fix - January 6, 2026

---

## Issue Summary

Render deployments were failing due to build errors in older commits:

- Commit ad0ed88 had syntax errors in `src/app/admin/settings/page.tsx`
- Commit 19373dad had Sentry import errors in `src/instrumentation.ts` and `src/lib/bugsnag-client.ts`

## Root Cause

Render was deploying older commits instead of the latest commit (dda7521) which already contained all fixes:

- Settings page syntax errors were removed
- Sentry to Bugsnag migration was completed
- All build errors were resolved

## Resolution

1. **Verified Local Build:** Confirmed that commit dda7521 builds successfully without errors

`bash`

```
npm run build # ✓ Build successful
```

2. **Git Status:** Confirmed latest commit is on GitHub

- Local HEAD: dda7521
- Remote HEAD: dda7521
- Status: Synchronized ✓

3. **Force Redeployment:** Created this documentation file to trigger Render auto-deploy

- This commit will signal Render to pull and deploy the latest code
- Latest code already contains all fixes

## What Was Fixed (in commit dda7521 and earlier)

1. ✓ Removed problematic `/src/app/admin/settings/page.tsx` with syntax errors
2. ✓ Completed Sentry to Bugsnag migration (no more missing imports)
3. ✓ Added Audit Logs navigation link to sidebar
4. ✓ Fixed Report Bug button positioning
5. ✓ Enhanced Audit Logs search functionality

## Expected Outcome

After this deployment:

- ✓ Build will succeed (verified locally)
  - ✓ All 3 Audit Logs finalization features will be visible:
1. Report Bug button in bottom-left position

2. Enhanced search (firstName, lastName, email)
3. Audit Logs navigation link in sidebar (admin only)

## Deployment Verification Steps

---

1. Check Render dashboard for successful build
  2. Verify application loads without errors
  3. Login as admin user
  4. Confirm “Audit Logs” link appears in sidebar
  5. Test all three finalized features
- 

**Commit:** Force redeployment with latest fixes

**Date:** 2026-01-06

**Status:** Ready for deployment
