

# Quick Fix: Update Render Build Command

## The Problem

Build is failing silently with no error output.

## The Solution

Use our verbose build script to see what's failing.

## Quick Steps

### 1. Go to Render Dashboard

```
https://dashboard.render.com
```

### 2. Select Service

Click on “carelinkai” (web service)

### 3. Go to Settings

Click “Settings” in left sidebar

### 4. Update Build Command

Find “Build Command” field

Change from:

```
npm install && npx prisma generate && npm run build
```

To:

```
bash render-build-verbose.sh
```

### 5. Save and Deploy

- Click “Save Changes”
- Click “Manual Deploy”
- Select “Deploy latest commit”

## What You'll See

The new build will show:

```
=====
STEP 1: INSTALL DEPENDENCIES
=====
[✓] npm install completed successfully

=====
STEP 2: GENERATE PRISMA CLIENT
=====
[✓] prisma generate completed successfully

=====
STEP 3: BUILD NEXT.JS APPLICATION
=====
[✓] npm run build completed successfully
```

Or it will show exactly which step fails and why!

## Time Required

---

- 2 minutes to update command
  - 5-10 minutes for deployment
- 

This will finally show us what's wrong! 🔎
