🚨 Dashboard Error - FIXED ✅

Problem

```
Dashboard Error: "Something went wrong"
Browser Console: TypeError: Cannot read properties of undefined (reading 'icon')
```

Root Cause

```
- API returned: type: 'assessment' | 'incident' | 'followup' | 'certification'
+ Component expected: type: 'error' | 'warning' | 'info' | 'success'
```

The Fix

File: `src/app/api/dashboard/alerts/route.ts`

Changed alert type mapping:

```
// Critical Incidents
- type: 'incident'       ➡ + type: 'error'

// Overdue Assessments
- type: 'assessment'     ➡ + type: 'warning'

// Expiring Certifications
- type: 'certification' ➡ + type: 'warning'

// Tours Scheduled
- type: 'followup'       ➡ + type: 'info'
```

Fixed field names:

```
- message: string        ➡ + description: string
- link?: string          ➡ + actionUrl: string
                           + actionLabel: string (NEW)
```

Status

```
✅ Fixed
✅ Built successfully
✅ Committed: 5da04b1
✅ Pushed to GitHub
🔄 Render deploying now (~3-5 minutes)
```

What to Expect

1. Dashboard will load without errors
2. Alerts will show with color-coded badges:
   - 🔴 Red: Critical incidents
   - 🟡 Amber: Warnings (assessments, certifications)
   - 🔵 Blue: Info (tours)
3. No console errors

Verification Steps

1. Wait for Render deployment to complete
2. Visit: https://carelinkai.onrender.com/dashboard
3. Open browser console (F12)
4. Verify: No errors, dashboard loads correctly

Fix completed: December 13, 2025
Deployment: Auto-deploying to Render
